

## Capillus Information

Capillus is a cohesive approach for hair loss managed by physicians. Capillus, which in Latin is the plural form used to designate the collection of hair on the scalp, is a non-surgical option for both men and women who battle hair loss.

### HOW DOES IT WORK?

Capillus uses a combination of therapies that is right for each individual. Contour Dermatology is within a network of authorized hair restoration professionals who evaluate patients with hair loss and recommend treatment options.

Low-level light therapy is believed to stimulate the hair for thicker, lustrous and more durable appearance. Laser therapy can be used alongside your hair restoration professional's methods of hair loss treatment, including topical solutions, prescription medication, and even hair transplants. Hair restoration surgeons recommend it as a complement for their hair transplant patients as a way to provide maintenance to the transplanted hair. It helps keep the transplanted hair stronger, preventing it from looking thinner over time. It also aims to keep the hair surrounding the transplanted hair strong. It also has been known to enhance the effect of the topical solutions.

### HOW EASY IS IT TO USE?

The answer will be determined by you and your lifestyle. Are you always willing to wash your hair on a daily basis, even if you just went to the salon the night before to have it done? Are you willing to apply a messy topical solution to your scalp every morning, regardless of how tired you wake up? Are you willing to make bi-weekly visits to your doctor's clinic to sit under a device, regardless of your vacation schedule for an indefinite period of time? Can you afford the treatment? Does the treatment have flexibility in payment options? You need to choose a treatment that is realistic for you.

### ABOUT THE PRODUCT

Low-level light therapy was first approved by the Food and Drug Administration in 2007 for the treatment of mild to moderate male pattern hair loss for a laser comb device that re-grows hair. In 2010, an in-office laser hood device for hair growth received FDA clearance for the treatment of hair loss in females by promoting hair growth of females with androgenetic alopecia. LLLT for hair loss has been demonstrated to increase cell metabolism and the health of blood vessels in the scalp for thicker, supple and more durable hair shafts. It has also been shown to stimulate the sebaceous glands for silkier-looking hair.

### WHY SHOULD YOU CHOOSE THIS PRODUCT?

Capillus272 laser cap device offers patients a convenient, simple method of LLLT, treating the scalp at home or while engaging in other daily activities for a few minutes every other day, as instructed by physician. It covers the entire region simultaneously and leaves no room for user error. The process is simple as it can be worn under any hat, is completely portable, and won't make hair greasy, like traditional topical solutions.

- Price of unit is \$3,000 which comes with a 3 year manufacturer's warranty.
- No returns to Contour-all returns must be sent to manufacturer to be repaired or replaced.
- NO REFUNDS
